Residential and Commercial

Product Catalogue

Another hot water solution from John Wood®.

John Wood® water heaters by Noritz are brought to the Canadian market through the exclusive partnership between GSW and Noritz. They complement GSW's portfolio of high performance residential and commercial gas water heating solutions. John Wood® also offers a full-range of accessories that makes installation quick and easy. The unique snap-together design of our N-Vent system saves time and money. N-Vent telescopic elements completely eliminate the need to cut vent pipe.

As a green building product it's environmentally friendly too!

John Wood® water heaters are extremely energy efficient, maximizing output while maintaining low emissions.

Features

- Abundant hot water
- Energy efficient
- Space savings
- Safe & reliable
- Easy to install

N-Vent – the most advanced venting system on the market.

Installation made simple and efficient.

GSW Water Heating

A leader in residential and commercial water heaters, GSW has evolved from a wood-burning stove company to a world-class designer and manufacturer of electric, natural gas, propane and oil fired water heaters. Backed by the company's manufacturing history of more than 150 years, GSW is recognized for design innovation and exceptional reliability.

Professionals recognize GSW brand names, such as John Wood®, for their unrivaled quality, efficiency and reliability. In fact, contractors have been trusting John Wood® for more than 50 years.

The new John Wood® Signature Series has been specifically designed for the needs of the professional installer. Our new gas models now deliver lower profiles for easy installation and maintenance, as well as smaller vent diameters and ultra-accurate dual electric thermostats for precision and control. What's more, our Signature Series electric models are custom built-to-order to ensure your exact specifications are met. All our heaters offer advanced features such as TankSaver® stainless steel inserts and glass-lined tanks for longer life.

GSW Water Heating

GSW is one of the largest North American water heater manufacturers and a major supplier of residential and commercial water heaters worldwide. We have built an organization that strives for excellence at every stage. Our Research and Development Team constantly develops prototypes for continuous improvement, while our CSA-certified lab tests efficiency, performance and safety. Our inspectors maintain our stringent quality control standards, and our Technical Service department provides customers with product information and technical support. Moreover, GSW offers customized solutions for order management and logistics needs. From design to manufacturing, from service to support, GSW is committed to delivering products renowned for their technological innovation and unparalleled quality.

Residential

GSW Safety Systems

Flammable Vapour Ignition Resistant (FVIR) technology you can trust.

GSW Water Heating has developed three unique Flammable Vapour Ignition Resistant (FVIR) Safety Systems that reduce the risk of accidental fires caused by the ignition of flammable vapours from products such as gasoline, paint thinner and solvents: the Flame Guard® and Flame Safe™ Safety Systems and the Superflue® Safety System.

Flame Guard® Safety System

The Flame Guard® Safety System is a recognized and proven technology, exclusive to GSW and John Wood residential gas water heaters. The award-winning Flame Guard® Safety System protects the consumer by trapping burning vapours within the water heater combustion chamber through the patented “Flame-Trap.” As long as the vapours are present and within the flammability range, they will continue to burn safely until they “burn themselves out.”

Flame Safe™ Safety System Used on John Wood® DV Water Heaters

Flame Safe™ technology - designed to protect the consumer against the ignition of flammable vapours.

Superflue® Safety System Used on John Wood® PV Water Heaters

The Flammable Vapour Ignition Resistant (FVIR) Superflue® Safety System is a cutting-edge design unique to GSW power vented residential gas water heaters. The Superflue® Safety System features a flammable vapour sensor that protects the consumer by detecting the presence of flammable vapours in the atmosphere around the water heater and disabling the unit to minimize the risk of ignition. It also features a robust air intake snorkel that inhibits flammable vapours from entering the combustion chamber and igniting.

Residential Gas

Proven Technology. Exceptional Reliability.
Peace-of-mind.

- Glass-lined inner flue prevents scaling.
- Robust 1/4" pilot tubing for durability.
- Exceeds new NRCan energy requirements.
- Large viewport for easy access to pilot.
- CFC-free foam insulation.

Residential Gas

Proven Technology. Exceptional Reliability.
Peace-of-mind.

John Wood® Power Vent

An advanced line of power vented water heaters for the professional.

- Flammable vapour sensor detects the presence of flammable vapours and automatically disables the unit preventing their ignition.
- Robust air intake snorkel inhibits flammable vapours from entering the sealed combustion chamber.
- State-of-the-art modular gas control features advanced self-diagnostic capability that makes troubleshooting quick and easy.
- All units can be vented horizontally through the wall or vertically through the roof with plastic venting pipe certified for gas fired appliances.
- Quietest power vent water heater on the market.

John Wood® Power Vent

An advanced line of power vented water heaters for the professional.

John Wood® Power Direct Vent

An advanced line of high efficiency power direct vented water heaters.

- Sealed combustion chamber design enhances air quality as no indoor air is required for combustion.
- Industry leading, ultra quiet blower continues the GSW tradition of quiet power vent water heaters.
- Convenient 3/4" side taps for combination applications.
- Energy savings - exceeds energy efficiency standards.
- Vented with 3" plastic pipe certified for gas fired appliances, up to 60 equivalent feet, horizontally through the wall or vertically through the roof.

Residential Oil

Exclusive, patented innovation.

- Immersion-type aquastat for precise water temperature control.
- Universal mounting design fits most burners.
- Ceramic fibre combustion chamber maximizes heat retention.
- Includes blocked flue safety switch.
- Suitable for combination applications, potable water and space heating.

Residential Oil

Exclusive, patented innovation.

*Direct Vent models must use vent kit and burner supplied by John Wood® with pre-purge and post-purge features. Burners are sold separately and warranted by the burner manufacturer.

For 63 Gallon unit see pages 46 and 47 in this book.

Oil Fired Burners

GSW offers oil burners designed and engineered by one of the industry's leading oil burner manufacturers.

Beckett

Beckett's residential flame-retention model AFG burner is easy to install and to service, engineered to provide years of reliable service, and backed by solid technical support. The AFG burner comes with a Beckett CleanCut Fuel Unit, Beckett R7184 Series 5 Primary Control, self-centering Nozzle Line Electrode Assembly and one-piece Flame Retention Head.

Oil Fired Burners

Specifications

Beckett Oil Burners

SKU#	GPH Input	BTU Input
J3006	0.65	91,000
J5006	0.75	105,000
J7006	1.00	138,000

Burner for Direct Vent Model (JWF307V)

SKU#	GPH Input	BTU Input
J3007	0.65	91,000

The quiet and efficient way to heat water.

- High grade stainless steel tank with brass connections for years of dependable service – no anode required.
- Submerged combustion chamber with spiral flue for 95-96% thermal efficiency and ultra-low standby heat loss.
- Woven metal fibre burner made of refractory steel resists corrosion, produces low NOx emissions and is resistant to thermal and mechanical shocks.
- Plug-and-play technology with no special adjustments at initial startup including no adjustments or de-rating for high altitude installations.
- Specifically designed for space heating.

100 US GALLON

34-50 US GALLON

The quiet and efficient way to heat water.

* When the boiler input exceeds 100,000 BTU/H and if the unit has a factory supplied T&P valve, it must be replaced with one rated for that input.
Head Loss: 3GPM-9" W.C., 5GPM - 24" W.C., 8GPM - 62" W.C.

Diaphragm Pump Tanks

Capacities from 2 to 119 US Gallons.

- Positive lock retention system ensures controlled compression in the diaphragm connection, eliminating the loss of air or water from the tank.
- Interior epoxy coating permanently bonded to the tank shell provides the ultimate protection on the water side of the tank.
- Durable butyl diaphragm ensures long life.
- Undercoated with zinc phosphate for the highest corrosion resistance.
- Welded steel base.

Thermal Expansion Tanks

The perfect solution for controlling thermal expansion.

- Available for hydronic or potable water applications.
- Durable drawn steel construction with 2-coat bonded polymer inner lining.
- Heavy duty butyl diaphragm, for permanent separation of air and water.
- IAPMO approved.
- Suitable for residential and commercial water heaters.
- In-line design, with 3/4" NPT connection: installs in cold water line of water heater.
- Field-adjustable 40 psi air charge on potable models, 12 psi on hydronic models.
- Maximum working pressure 150 psi on potable models, 100 psi on hydronic models.
- Maximum temperature: 180°F on potable models, 240°F on hydronic models.
- NSF 61 approved on potable water tanks.

Signature Series

A proud tradition of leadership.

The new John Wood® Signature Series has been specifically designed for the needs of the professional installer. Our new gas models now deliver lower profiles for easy installation and maintenance, as well as smaller vent diameters and ultra-accurate dual electric thermostats for precision and control. What's more, our Signature Series electric models are custom built-to-order to ensure your exact specifications are met. All of our heaters offer advanced features such as TankSaver® stainless steel inserts and glass-lined tanks for longer life.

Signature Series Gas

A proud tradition of leadership.

- Dependable three-leg design for better leveling.
- Galvanized steel bottom for long life.
- CFC-free foam insulation.
- Meets or exceeds ASHRAE 90.1 1999 energy efficiency standards.
- Removable anodes protect the inner glass-lined tank.
- Robust 1/4" pilot tubing.

Signature Series Gas

A proud tradition of leadership.

Power Vent Kits

Advanced technology with Tjernlund venting products for all Signature Series models.

POWER VENT KITS

Part #	BTU	Max. Equivalent (ft.)	Vent Diameter (in.)	Weight (lb.)
59028	125,000 thru 250,000	100*	4 to 6	20
59029	270,000 thru 399,000	100	6	22

Includes 40' Quick Connect interlock cable.
Can be installed with zero clearance to combustible materials.
Stainless steel construction in critical areas.
Factory wired safety and operating controls.
Ultra-fine draft adjustment and slide-out access to all internal components.

* Consult installation manual for vent length vs. vent diameter.

POWER VENT KITS

Signature Series Electric

Custom built-to-order.

- Meets or exceeds ASHRAE Efficiency Standards.
- Factory installed 1 1/2" dielectric cold water inlet and hot water outlet nipples for ease of installation.
- 2" CFC-free foam insulation.
- Conveniently located handhole cleanout.
- Factory installed T&P and brass drain valve.

Configure Your Model:

1. Select surface thermostat (JW-ES) or immersion thermostat (JW-EI)
2. Select size (50, 80 or 119 US gallons)
3. Select input from 6 to 54 KW
4. Select voltage: 208, 240, or 600
5. Select phase 1 or 3
6. e.g., JW-EI-80-450-240-3 is an 80-US gallon, 45 KW, 240 volt, 3 phase Signature Series Commercial Electric water heater with an immersion thermostat.

Light Duty Commercial Gas

The right fit for lower demand commercial applications.

JW3-75-3NC Model

- Dependable three-leg design for better leveling.
- Galvanized steel bottom for long life.
- CFC-free foam insulation.
- Meets new NRCan energy efficiency standards.
- 180°F thermostat to meet commercial water requirements.

Light Duty Commercial Gas

The right fit for lower demand commercial applications.

The quiet and efficient way to heat water.

- High grade stainless steel tank with brass connections for years of dependable service – no anode required.
- Submerged combustion chamber with spiral flue for 95-96% thermal efficiency and ultra-low standby heat loss.
- Woven metal fibre burner of refractory steel resists corrosion, produces low NOx emissions and is resistant to thermal and mechanical shocks.
- Uniform combustion provides excellent heat transfer.
- Plug-and-play technology with no special adjustments at initial startup including no adjustments or de-rating for high altitude installations.

The quiet and efficient way to heat water.

JW John Wood

SIGNATURE SERIES

John Wood® Signature Series Gas Commercial Water Heaters are designed specifically for professional installers.

Intelligent electronic integrated control, featuring:

- Self diagnostic
- Displays error codes
- Ease of accurate temperature settings
- Displays temperature at each sensor
- Temperature can be adjusted from 90°F to 180°F
- All connections inside the integrated control are not interchangeable
- Ease of serviceability and installation

For more information see pages 37 to 49 in this book.

Tankless

Residential Models

John Wood® residential water heaters by Noritz are designed to provide abundant hot water for the entire home. All residential tankless water heaters are backed by a 10-year warranty.

Commercial Models

Commercial tankless water heaters use commercial grade materials, such as a coated copper heat exchanger and 25% thicker piping than the residential models, making John Wood® commercial water heaters unique. Up to 24 can be linked with a system controller to provide abundant hot water for heavy industrial applications.

Direct Vent, Sealed Combustion Models

John Wood® offers Direct Vent models for use in areas where combustion air from indoors is not available, such as spas, hair salons, or air tight spaces. John Wood® Direct Vent models take air from outside for combustion. The John Wood® line includes the only commercial Direct Vent unit on the market. This unit has a coated copper heat exchanger and 25% thicker piping than residential models to ensure years of service.

Quick-Connect

All John Wood® commercial, direct vent and most residential models are Quick-Connect compatible, allowing two units to be installed in series, doubling water capacity when needed.

Accessories

GSW offers a full line of accessories making installation quicker and easier, not to mention cleaner and more aesthetically pleasing. GSW is the “one-stop shop,” supplying everything from tankless water heaters to valves to stainless steel venting.

John Wood[®] by Noritz

Tankless for professionals.

- Product line includes the highest input commercial tankless water heater and the only direct vent model on the market.
- State-of-the-art gas combustion technology maximizes output and provides temperature stability, while maintaining low emissions.
- High-tech electronics provide precise control and safety, while minimizing temperature fluctuations.

John Wood® Power Direct Vent

An advanced line of *high efficiency power direct vented water heaters.*

High Quality
Features:

- Sealed Combustion Chamber Design
- Industry Leading Ultra Quiet Blower
- Exceed Energy Efficiency Standards
- Flexible Venting Configurations

For more information about this product from John Wood®, flip back to pages 12 & 13 in this book or call 1-888-599-2837.

Reference Calculations and Conversions for Electricity

Ohm's Law

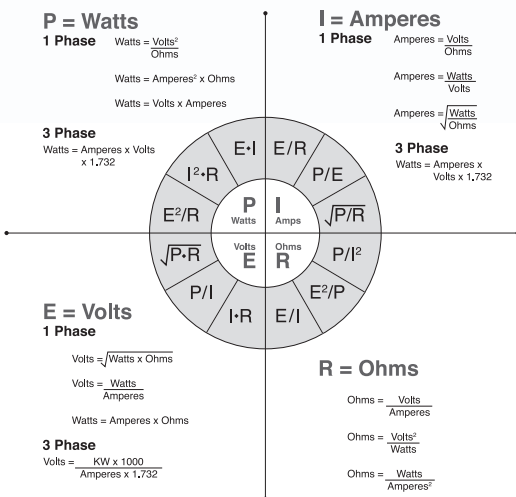

Ohm's Law defines the relationships between (P) power, (E) voltage, (I) current, and (R) resistance. One ohm is the resistance value through which one volt will maintain a current of one ampere.

(I) Current is what flows on a wire or conductor like water flowing down a river. Current flows from points of high voltage to points of low voltage on the surface of a conductor. Current is measured in (A) amperes or amps.

(E) Voltage is the difference in electrical potential between two points in a circuit. It's the push or pressure behind current flow through a circuit, and is measured in (V) volts.

(R) Resistance determines how much current will flow through a component. Resistors are used to control voltage and current levels. A very high resistance allows a small amount of current to flow. A very low resistance allows a large amount of current to flow. Resistance is measured in ohms.

(P) Power is the amount of current times the voltage level at a given point measured in wattage or watts.

Appendices

Reference Guide for Water Heating

One US gallon of fresh water weighs 8.333 lb.

Water expands 4.34% heated from 40° to 212° F.

1 BTU = Amount of heat required to raise the temperature of 1 lb. of water 1° F.

$$\text{Recovery GPH} = \frac{\text{KW} \times 3412}{8.33 \times \Delta T}$$

(Electric)

$$\text{Recovery GPH} = \frac{\text{Input} \times \text{Efficiency}}{8.33 \times \Delta T}$$

(Gas)

$$\text{Req. BTU Input} = \frac{\text{Water Heater Capacity} \times 8.33 \times \Delta T}{\% \text{ Efficiency}}$$

First Hour Draw (FHD)

$$\text{FHD} = (\text{Storage} \times \% \text{ Efficiency}) + \text{Recovery}$$

% of hot and cold water needed to be mixed to obtain a desired temperature

$$\text{Hot water percentage} = \frac{M-C}{H-C}$$

$$\text{Cold water percentage} = \frac{H-M}{H-C}$$

Water C = Cold Water Temperature

H = Hot Water Temperature

M = Mixed Water Temperature

$$\% \text{ Efficiency} = \frac{\text{GPH} \times 8.33 \times \text{Temp. Rise}}{\text{BTU/Hr. Input}}$$

Appendices

Reference Guide for Water Heating

$$\text{BTU/Output} = \text{GPH} \times 8.33 \text{ lbs./Gal.} \times \text{Temp. Rise}$$

$$\text{BTU/Input} = \frac{\text{GPH} \times 8.33 \times \text{Temp. Rise}}{\% \text{ Efficiency}}$$

$$\text{KW} = \frac{\text{GPH} \times 8.33 \times \text{Temp. Rise}}{3413}$$

Temperatures

To convert from degrees Centigrade (C) to degrees Fahrenheit (F) multiply the number of degrees C by 9/5 (or 1.8) and add 32.

To convert from degrees Fahrenheit (F) to degrees Centigrade (C) first subtract 32 from the number of degrees F then multiply the remainder by 5/9 (or 0.556).

Gas/Oil

Gas		BTUs
1 lb. of Butane	=	21,300
1 Gal. of Butane	=	102,600
1 Cu. Ft. of Butane	=	3,260
1 Cu. Ft. of Manufactured	=	530
1 Cu. Ft. of Mixed	=	850
1 Cu. Ft. of Natural	=	1,075
1 lb. of Propane	=	21,600
1 Gal. of Propane	=	91,700
1 Cu. Ft. of Propane	=	2,570

Appendices

Reference Guide for Water Heating

Oil vs. Electric vs. Propane vs. Natural Gas

Oil	1 litre = 36,515 BTUs* Example Price = 60.0¢/litre
Electric	1 Kilowatt Hour = 3,413 BTUs* Example Price = 10.1¢/KW (kilowatt)
Propane	1 litre = 24,197 BTUs* Example Price = 63.0¢/litre
Natural Gas	1 M ³ 35,310 BTUs* Example Price = 44.0¢/M ³ (cubic metre)**

Formula
$$\frac{\text{BTUs per Unit} \times \text{Efficiency}}{\text{Cost per Unit}}$$

Example: Propane = $\frac{24,197}{0.63} \times 92\% = 35335$ BTUs per \$1.00

GST is extra on all prices.

* Information supplied by The Ontario Ministry of Energy.

** This price reflects delivery charge and monthly administration charge to service your account.

Formulas and Facts

- 1 gallon of water weighs 8.33 lbs.
- 1 gallon of water has a volume of 231 cubic inches
- 1 cubic foot of water weighs 62.38 lbs. and contains 7.48 gallons of water
- 100 feet of 3/4" copper pipe contains 2.5 gallons of water; 1" pipe contains 4.3 gallons
- 8.33 BTU will raise 1 gallon of water 1°F at 100% efficiency (electricity)

Appendices

Reference Guide for Water Heating

- 11 BTUs are required to raise 1 gallon of water 1°F at 70% efficiency (gas)
- 3,412 BTUs equal 1 kilowatt hour (KW)
- 1 KW will raise 410 gallons of water 1°F at 100% efficiency
- 1 BTU x 0.293 = watts
- 1 KW = 1000 watts
- 2.42 watts are required to raise 1 gallon of water 1°F
 - 1 KW will raise 10.25 gallons of water 40°F at 100% efficiency
 - 1 KW will raise 6.8 gallons of water 60°F at 100% efficiency
 - 1 KW will raise 5.1 gallons of water 80°F at 100% efficiency
 - 1 KW will raise 4.1 gallons of water 100°F at 100% efficiency

Formula for mixing hot water

$$\frac{M-C}{H-C} = \text{Percent of hot water required to produce desired mixed temperature}$$

Where M = mixed water temperature; C = cold water temperature;
H = hot water temperature

For example: How much of a shower is hot water and how much is cold water?

My shower temperature is 105°F, my water heater thermostat is set on 120°F and the cold water inlet temperature is 50°F.

$$\frac{105 - 50 = 55}{120 - 50 = 70} = 79\% \text{ of the shower is } 120^\circ \text{ hot water}$$

This formula for mixing hot water is important when explaining a NOT ENOUGH HOT WATER trouble call and the water heater is functioning properly.

Appendices

Reference Guide for Water Heating

ELECTRIC	GAS
Energy Costs:	Energy Costs:
KW x fuel costs = energy costs	Cubic feet x fuel costs = energy costs
$100 \times 0.05 = \$5.00$	$100 \times 0.75 = \$7.50$
To obtain gallons per hour (GPH) recovery $\frac{\text{WATTS}}{2.42 \times (\text{temp rise } ^\circ\text{F})}$	To obtain gallons per hour (GPH) recovery $\frac{\text{HOURLY INPUT (BTUs)}}{11.0 \times (\text{temp rise } ^\circ\text{F})}$
<p>I have a 30-gallon electric heater, non-simultaneous operation, 4,500 watt elements. What is the recovery GPH if my cold water is 40°F and my thermostat is set to 120°F?</p> $\frac{4,500}{2.42 \times 80} = 23 \text{ gallons per hour}$	<p>I have a 30-gallon gas heater, rated at 40,000 BTUs. Innovative Designs, Built-to-Last

John Wood® Water Heaters are designed and built with innovative features to ensure maximum quality, safety and reliability. Our heaters are thoroughly factory tested, field-proven and meet or exceed industry standards.

TankSaver®

The exclusive and patented TankSaver® design prolongs tank life. TankSaver® impedes corrosion by guarding metal tank openings from exposure and keeping them watertight. The durable construction virtually eliminates rust.

American Society of Mechanical Engineers (ASME)

In June 2004, GSW Water Heating, Ferguson plant became authorized by ASME to build tanks in accordance with the ASME Boiler and Pressure Vessel Code.

ASHRAE Efficiency Standard 90.1 1999

GSW Signature series commercial water heaters meet the ASHRAE Efficiency Standard 90.1 1999. The burner efficiency of these units is over 80%.

Certified Hydrostatic Tests

Design test pressure - 300 psi. Maximum working pressure - 150 psi.

NRCAN Standard

All GSW/John Wood® residential water heaters meet or exceed NRCAN energy efficiency standards.

Coast-to-Coast Service & Support

In order to bring you unsurpassed quality and reliability after you've purchased a GSW John Wood® product, we've created a number of service and support resources to help take you through installation and beyond. Operating hours are 8:00 a.m. to 6:00 p.m. EST for our Technical Support call centre (1-888-479-8324), which is staffed by technical experts who provide in-depth product support and troubleshooting advice. We offer a wide range of hands-on training programs from basic refresher courses to product-specific programs. Our spare parts inventory carries a comprehensive supply of GSW parts to help make repairs fast and easy.

Warranty

1. Warranty terms are set out on the warranty certificate enclosed with each unit. 2. Warranty replacements are issued only in the case where a John Wood® heater is used to replace an approved John Wood® warranty claim. 3. Extended warranty sticker programs are available.
